## Introduction

The Superfund Action Code Dictionary provides guidance to users on the appropriate use of action codes and Site Allowances for financial transactions for specific Program Results Codes (PRCs) for the Superfund Removal, Remedial, Federal Facilities, and Enforcement programs. Superfund financial transactions associated with other PRCs not included in this dictionary are not subject to this guidance. Except where specified in the dictionary, all codes are applicable to both intramural and extramural Superfund resources. This dictionary supersedes previous years' versions of the Action Code Dictionary.

For each action code, the dictionary identifies the allowable site designators (site-specific, "WQ", "ZZ", or non-site-specific), which dictate what types of Site/Spill Identifier codes (SSIDs) may be used for that action code. Allowable lead codes, which are used in the CERCLIS database (the National Program's accomplishments database), are also identified in the dictionary, but are not applicable for financial transactions.

Consistent with prior year practice, the dictionary represents guidance to assist Superfund Program offices in the management of Superfund program resources. Action code definitions are only guidelines for the use of these codes, and unless other guidance (e.g., the Superfund Program Implementation Manual--SPIM), Resources Management Directives (RMDS), CERCLA, relevant regulations, or contractual agreements (e.g., SOWs) specify limited uses for these codes, best professional judgment should be applied where uncertainty exists in categorizing costs. Users should consult with the appropriate National Program Manager office before acting in variance to this guidance.

The Action Code Dictionary consists of five sections in addition to this introduction.

The first section summarizes changes from the previous version of the dictionary.

The second section contains a series of subsections, divided by PRC and by Site Allowance, where applicable, that provide definitions for each action code that may be used for financial transaction purposes. For ease of use, action codes are also grouped into general subcategories within each PRC.

The third section provides definitions for site designators and Site Allowances for the tables. Lead code definitions are in the SPIM.

The last two sections are tables that summarize allowable coding for each action code without providing action code definitions. The first table is organized alphabetically by Action Name, and is contained in the SPIM. The second table is organized by Action Code.

## Changes from Previous Version

In FY 2012, a number of changes to the Action Code Dictionary were implemented from the FY 2010 versions, which were also in effect in FY 2011. Most notably, intramural and extramural versions of the dictionary were merged to simplify data entry and reporting and to reduce coding errors. The following additional revisions have also been included in the dictionary:

- PRC codes have been updated to reflect the current Agency Strategic Plan
- With the exception of the BRAC PRC, PRC codes for financial transactions subject to this guidance are now six characters long (the Agency Activity code is no longer in use)
- Except where specified, all action codes in the dictionary may be used for intramural and extramural purposes.
- Action code definitions have been modified slightly, primarily to reflect intramural and extramural uses.
- One new action code has been established and none have been eliminated. (QV – PRP Search replaces NS and RP for new searches. Regions can continue to use NS and RP for existing searches. Contact Alice Ludington with questions.)
- References to several action codes for which financial transactions are no longer used have been deleted.
- The Removal Oversight (BB) action code has been added to the Remedial Program Pipeline Site Allowance (for Remedial Program oversight of time-critical and non-time-critical removal actions at NPL sites) in the Remedial Program PRC (302DD2).
- The HRS Package (HR) and the Generic PA/SI (QB) action codes have been added to the Federal Facilities Program PRC (303DC9) for headquarters use only.
- Lead codes have been eliminated for many action codes. Enforcement lead codes are changed from FE and SE to F and S, respectively. These changes affect data entry into CERCLIS and CERCLIS reports but have no impact on financial transaction data.
- The following errors from the FY 2010 extramural dictionary have been corrected:
  - The site designator for the CERCLA Criminal Enforcement (CC) action code is “S” (site-specific)
  - The General Enforcement (GE) and Negotiation – Generic (NE) action codes have been added to the OCFO Enforcement Program PRC (501JC7)
